

SANI-SYSTEM

Clean & Sanitize Kit for Water Softeners

Combines the industry's only EPA & NSF approved sanitizer with Res Care, the industry's #1 resin cleaner.

The new Sani-System Clean & Sanitize Kit contains both Sani-System® liquid sanitizer and Pro Res Care® resin cleaning solution in handy single-use doses. Sani-System is the only EPA and NSF approved sanitizer for use in water softeners. It's proven to kill 99.99% of harmful bacteria without the use of chlorine, oxidizers or acids that can harm system equipment, parts and resin. Pro Res Care restores softener beads and control valve parts to peak efficiency and maintains the life of the unit.

Application:

Water Softeners

Step 1. Pour entire contents of the Pro Res Care bottle directly into brine well. For softeners with no brine well, pour directly into the salt tank when the salt level is low.

Step 2. Pour entire contents of the Sani-System packet directly into the brine well.

Step 3. Manually regenerate the unit or allow regular regeneration to occur.

The Sanitizing Standard

User Benefits

- Faster, easier and safer than other alternative sanitizers
- Easy and reliable single-dose packets
- 99.99% effective kill rate against harmful bacteria
- Prevents iron and mineral build-up on integral parts of the softener
- Maintains maximum performance of unit

Technical Information

- Sani-System is a clear liquid and will react to oxidizers
- Routine storage. Rubber gloves are suggested when handling this product. Read relevant MSDS before handling product.
- Certified to NSF/ANSI 60 Standards
